EDUCATION

Columbia University

New York, NY

*Ph.D. in Computer Science. Advised by **Richard Zemel***

Jan 2024 – Present (Expected 2028)

M.S. in Computer Science (Machine Learning track). GPA: 4.0/4.0

May 2022

Ramaiah Institute of Technology

Bengaluru, India

*B.E. in Computer Science and Engineering. **Gold Medal** (Rank 1 of 180+). GPA: 9.76/10*

Aug 2020

SELECTED RESEARCH

* First author

Re-Evaluating Continual Learning with Few-Shot Adaptation*

NeurIPS 2026

Shows that evaluation with few-shot adaptation captures surprising results in continual learning that standard 0-shot evaluation does not. Re-defines continual plasticity and optimizes for learning-to-learn with novel methods. [arXiv:2606.03843](#)

Level Up: Defining and Exploiting Transitional Problems for Curriculum Learning*

CoLLAs 2026 (WiP)

A method that stratifies data by learning difficulty to a model, using the consistency of predictions across a series of stronger models. Experiments across series show strong performance and improved interpretability. [arXiv:2603.13761](#)

QuEst: Enhancing Estimates of Quantile-Based Distributional Measures Using Model Predictions

ICML 2025

A technique to leverage large amounts of high-noise data (e.g., LLM-generated synthetic labels) to enhance quantile estimates made from a small amount of low-noise data, via variance reduction. [arXiv:2507.05220](#)

LogicLearner: A Tool for the Guided Practice of Propositional Logic Proofs*

Under Review

A tool for practicing propositional logic proofs, with a novel AI proof-solver for real-time hints. A two-semester user study with undergraduate Discrete Mathematics students at Columbia found improved student confidence. [arXiv:2503.19280](#)

PROFESSIONAL EXPERIENCE

Salesforce

San Francisco, CA

Software Engineer — Salesforce Data Cloud, Fabric Layer

Jun 2022 – Dec 2023

- Operated the Data Processing Controller (DPC) for Spark jobs on AWS EMR/EKS; \$10M/month of compute.
- Led DPC enhancements: job prioritization, GovCloud compliance, Spinnaker/Terraform rollouts.
- Spearheaded Airflow-on-Kubernetes DAG enhancements; led critical database upgrade with zero downtime.

Software Engineer Intern — ML Services team, Einstein Platform

Jun 2021 – Sep 2021

- Created a Python SDK to reduce bring-your-own-model containerization/deployment from hours to minutes.
- Published a Python package with company-wide visibility for rapid ML prototyping on the Einstein platform.

Cadence Design Systems

Bengaluru, India

Software Engineer — R&D team, Pegasus Verification System

Jul 2020 – Sep 2020

- Devised and integrated a C++ engine to improve Pegasus microchip Design Rule Check efficiency.
- Enhanced automated test generation for microchip density and fill characteristics in Python and KLayout.

SERVICE AND AWARDS

Lead Organizer — Continual Learning Working Group, NSF ARNI Institute

2025 – Present

Coordinate biweekly meetings and lead a shared project initiative for the NSF AI Institute for Artificial and Natural Intelligence ([arni-institute.org](#)); 70+ faculty and students across Columbia, Stanford, Princeton, and other universities.

Conference Reviewer — ICLR 2027, NeurIPS 2026, NeurIPS 2025 CCFM Workshop

Teaching Assistant — Columbia University

COMS 6998 Topics in Computer Science: Continual Learning and Memory Models (Fall '26).

COMS 4776 Deep Learning (Fall '25); COMS 4771 Machine Learning (Summer '21, Spring '22).

Summer Research Fellowship — Indian Academy of Sciences

2018

Highly selective national research fellowship. Conducted research at the NeuroDynamics Lab, Indian Institute of Science.

TECHNICAL SKILLS

Research

PyTorch, Hugging Face, Pandas, Statistical Methods, Parser Generators (Lark, ANTLR)

Engineering

Python, Java, C++, UNIX, AWS, Kubernetes, Spark, Airflow, CI/CD, SQL, MongoDB, Lucene
